

SENDING DATA FROM RASPBERRY-PI TO IBM WATSON

Date	3 NOVEMBER 2022
Team ID	PMT2022TMID32463
Project Name	GAS LEAKAGE MONITORING AND ALERTING SYSTEM FOR INDUSTRIES

AIM:

To send sensor data (or any dummy data) from Raspberry –Pi to IBM Watson .In our case it is DHT sensors Data.

REQUIREMENTS:

HARDWARE:

- RASPBERRY-PI (3B)(WITH ETHERNET CABLE OR WIFI CONNECTED)
- USB MOUSE
- USB KEYBOARD
- VGA TO HDMI CABLE
- A MONITOR
- RASPBERRY’S POWER SUPPLY
- DHT-11 Sensor
- Connecting Wires

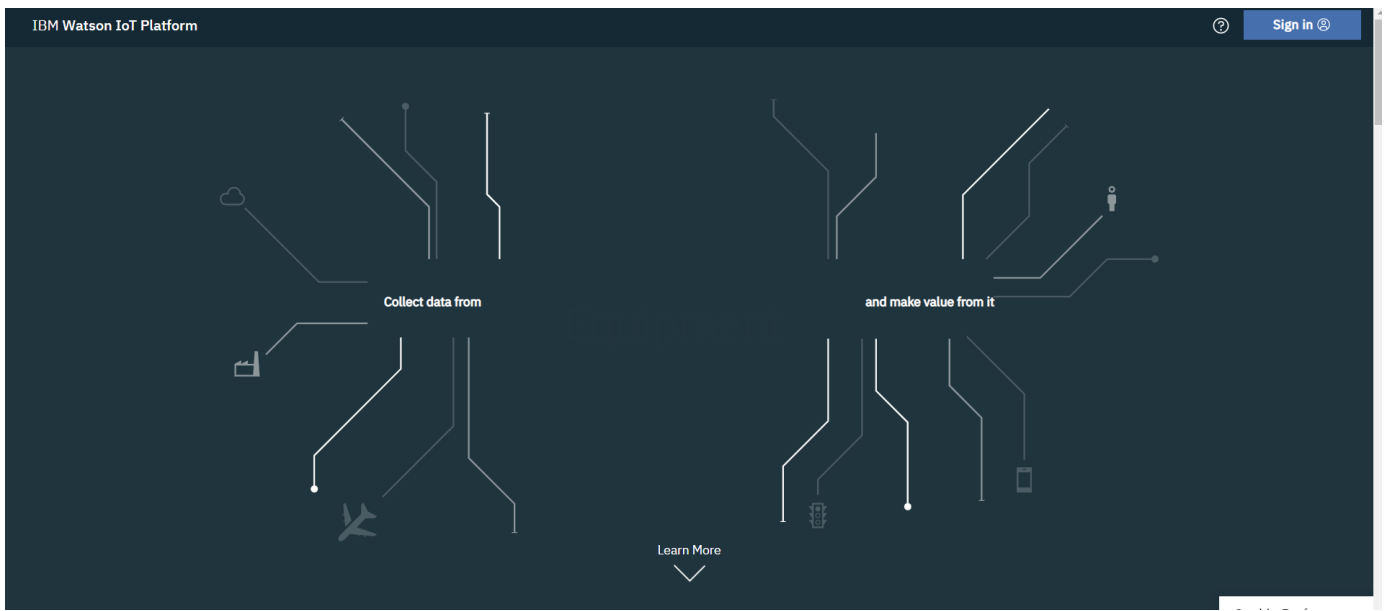

SOFTWARE:

- IBM BLUEMIX ACCOUNT

STEPS TO BE FOLLOWED:

Step-1: Create a device in IBM Watson:

- Firstly, login into your IBM-Bluemix account with your e-mail ID and Password.

IBM

Log in to IBM

IBM Watson IoT Platform Journey

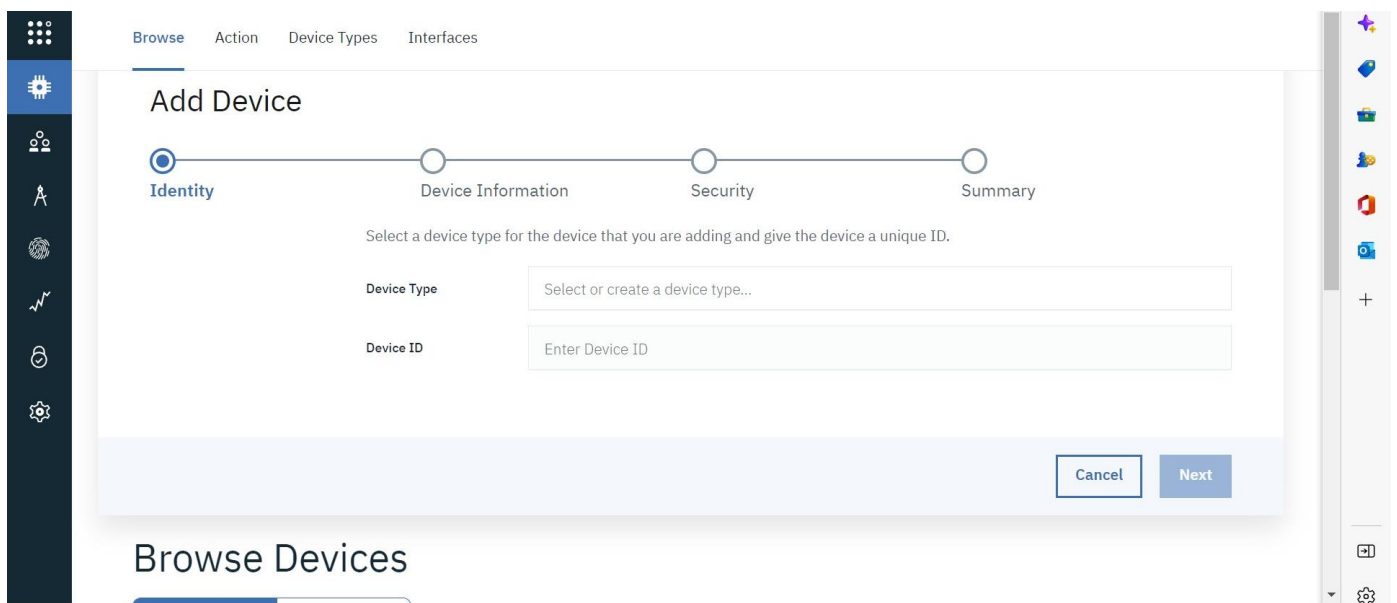

☒ Lite

☐ Non-Production

- Dashboard of IBM Watson IoT platform,
- Click on Add device

- After click on Add device this page will open

- Go to device type and fill the details.

Browse Action **Device Types** Interfaces

Add type

Identity Device Information

Device types group devices that have similar characteristics, such as model number, firmware version, or location. Give the device type a unique name and a description that identifies characteristics that are shared by devices of this type.

Type Or

Name

The device type name is used to identify the device type uniquely and uses a restricted set of characters to make it suitable for API use.

Description

Cancel Next

- Click on Finish

Serial Number	<input type="text" value="Enter Serial Number"/>	Manufacturer	<input type="text" value="Enter Manufacturer"/>
Model	<input type="text" value="Enter Model"/>	Device Class	<input type="text" value="Enter Device Class"/>
Description	<input type="text" value="Enter Description"/>	Firmware Version	<input type="text" value="Enter Firmware Version"/>
Hardware Version	<input type="text" value="Enter Hardware Version"/>	Descriptive Location	<input type="text" value="Enter Descriptive Location"/>

Back Finish

- Click on Register Device.

- Choose the device and give device ID and then click on next.

➤ Click on Next

The screenshot shows the 'Add Device' form in the 'Device Information' step. The form has a progress bar at the top with four steps: Identity (checked), Device Information (active), Security, and Summary. Below the progress bar, there is a text box that says 'You can modify the default device information and enter more information about the device for identification purposes.' The form is divided into two columns. The left column contains fields for 'Serial Number', 'Model', 'Description', and 'Hardware Version'. The right column contains fields for 'Manufacturer', 'Device Class', 'Firmware Version', and 'Descriptive Location'. Each field has a placeholder text 'Enter [field name]'. At the bottom left of the form, there is a button labeled 'Add Metadata' with a plus icon.

The screenshot shows the 'Add Device' form in the 'Security' step. The form has a progress bar at the top with four steps: Identity (checked), Device Information (checked), Security (active), and Summary. Below the progress bar, there is a text box that says 'There are two options for selecting a device authentication token.' The form is divided into two columns. The left column is titled 'Auto-generated authentication token (default)' and contains a text box that says 'Allow the service to generate an authentication token for you. Tokens are 18 characters and contain a mix of alphanumeric characters and symbols. The token is returned to you at the end of the device registration process.' The right column is titled 'Self-provided authentication token' and contains a text box that says 'Provide your own authentication token for this device. The token must be between 8 and 36 characters and contain a mix lowercase and uppercase letters, numbers, and symbols, which can include hyphens, underscores, and periods. Do not use repeated characters, dictionary words, user names, or other predefined sequences.' At the bottom, there is a text box labeled 'Authentication Token' with a placeholder text 'Enter an optional token' and an information icon. Below the text box, there is a text box that says 'Make a note of the generated token. Lost authentication tokens cannot be recovered. Tokens are encrypted before being stored.' and a text box that says 'Authentication token are encrypted before we store them.'

Browse Action Device Types Interfaces

Add Device

Identity Device Information Security Summary

There are two options for selecting a device authentication token.

Auto-generated authentication token (default)

Allow the service to generate an authentication token for you. Tokens are 18 characters and contain a mix of alphanumeric characters and symbols. The token is returned to you at the end of the device registration process.

Self-provided authentication token

Provide your own authentication token for this device. The token must be between 8 and 36 characters and contain a mix lowercase and uppercase letters, numbers, and symbols, which can include hyphens, underscores, and periods. Do not use repeated characters, dictionary words, user names, or other predefined sequences.

Authentication Token Enter an optional token ⓘ

Make a note of the generated token. Lost authentication tokens cannot be recovered. Tokens are encrypted before being stored.

Authentication token are encrypted before we store them.

➤ Click on Finish

The screenshot shows the 'Add Device' wizard in a web application. The wizard has four steps: Identity, Device Information, Security, and Summary. The 'Summary' step is currently active, indicated by a blue circle. The text 'Verify that the following information is correct then select Finish' is displayed. The information shown is: Device Type: Nagarajan, Device ID: 12345, and Security Token: To be generated. There is a 'View Metadata' button. At the bottom right, there are 'Back' and 'Finish' buttons.

STEP-2: INSTALLING NECESSARY PACKAGES ON YOUR PI:

- Now we are going to install necessary packages on your pi.
- Open your terminal in your pi and type the following commands
- `curl -LO https://github.com/ibm-messaging/iot-raspberrypi/releases/download/1.0.2.1/iot_1.0-2_armhf.deb`
- `sudo dpkg -i iot_1.0-2_armhf.deb`
- `service iot status`

Following are the images as to what appears on your pi's terminal when u type these commands

```

pi@raspberrypi:~$
```

- I have sent DHT-11 Sensors data to ibm bluemix .To get the code u need to login into IOT GYAN.
- Then I get the image as follows in my pi's shell:

```
Python 2.7.13 (default, Jan 19 2017, 14:48:08)
[GCC 6.3.0 20170124] on linux2
Type "copyright", "credits" or "license()" for more information.
>>>
===== RESTART: /home/pi/Downloads/dht11toibmiot.py =====
2017-10-23 07:10:37,768 ibmiotf.device.Client INFO Connected successfully: d:gegtl4:mydevice:mydevice
Published Temperature = 28 C Humidity = 50 % to IBM Watson

Published Temperature = 29 C Humidity = 50 % to IBM Watson
```

Step-3: checking your data sent on IBM Bluemix:

- After you have sent your sensors data you can check whether it is received at your iot platform Just look at the image below and if u see the same wifi kind of symbol on your created device then your data is being received.

IBM Watson IoT Platform

1 of 1 page < 1 >

1 Simulation running

Activate Windows
Go to Settings to activate Windows.

- After double clicking on your created device you can see the received data as shown in image

The screenshot displays the Watson IoT platform interface. At the top, there are tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. A sidebar on the left contains various icons. The main content area shows a table of devices. The selected device, ID 12345, is shown in detail. It is a 'Nagarajan' device, status 'Disconnected', added on 'Oct 31, 2022 11:38 AM'. Below the device details, there is a section for 'Recent Events' showing a live stream of data. The events are listed in a table with columns: Event, Value, Format, and Last Received. The events are all 'event_1' and contain JSON data for 'Hazardous Gas', 'Temperature', and 'Humidity'. The status bar at the bottom indicates '1 Simulation running'.

Event	Value	Format	Last Received
event_1	{"Hazardous Gas":61,"Temperature":88,"Humidit..."}	json	a few seconds ago
event_1	{"Hazardous Gas":20,"Temperature":36,"Humidit..."}	json	a few seconds ago
event_1	{"Hazardous Gas":79,"Temperature":56,"Humidit..."}	json	a few seconds ago
event_1	{"Hazardous Gas":52,"Temperature":82,"Humidit..."}	json	a few seconds ago
event_1	{"Hazardous Gas":26,"Temperature":33,"Humidit..."}	json	a few seconds ago

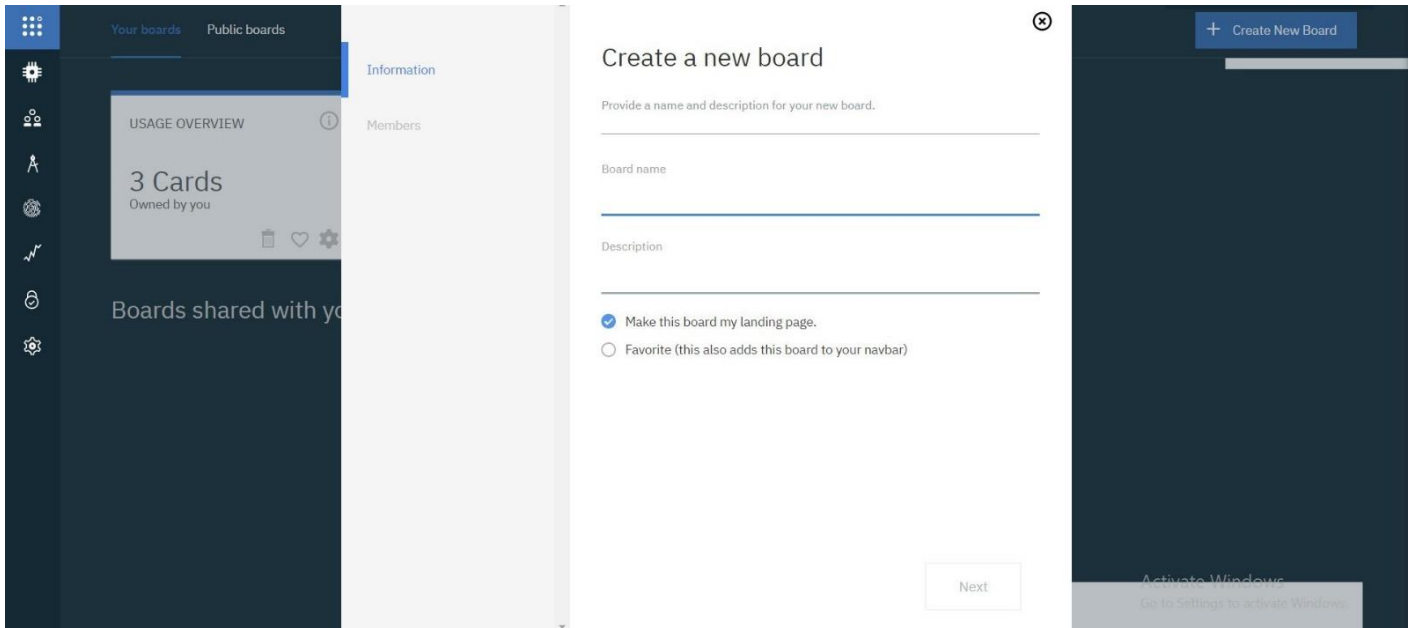

Step-4: Creating boards and cards for visualization of data:

- In your Watson platform you have an option called board .Click on it and you get the following window on your screen

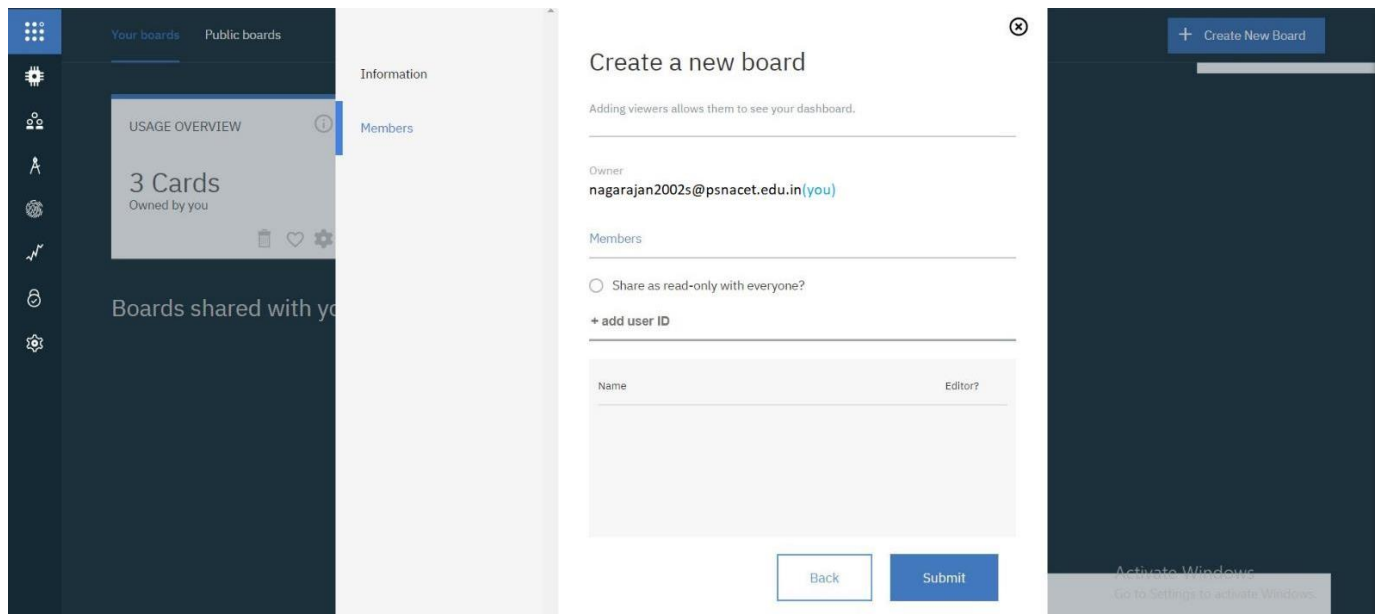

The screenshot shows the 'Your boards' section of the Watson IoT platform. There are two boards visible: 'USAGE OVERVIEW' with 3 cards and 'RISK AND SECURITY OVERVIEW' with 4 cards. Both boards are owned by the user. A large dashed box with a plus sign indicates where to click to create a new board. The status bar at the bottom indicates '1 Simulation running'.

- Click on Create a new board to create a board .

The given below window appears give a name and description to your board as shown in the window below.

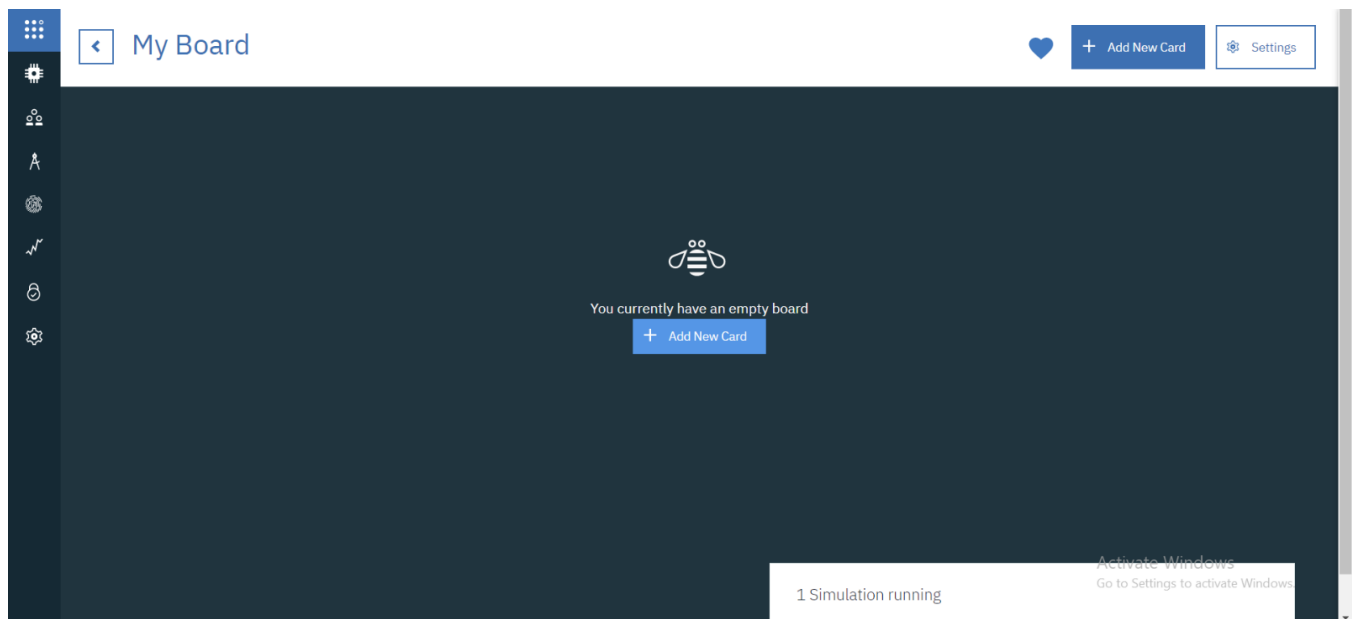

- Then click on Next you get the below window then again click on Submit

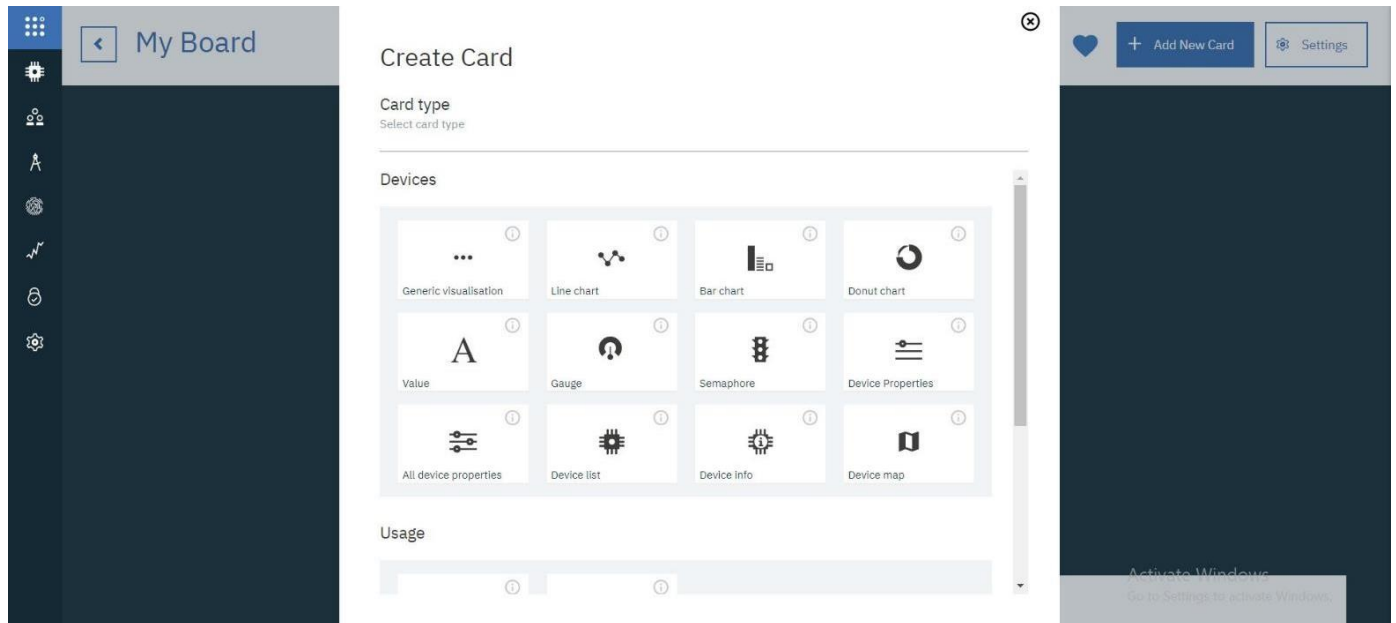

- Then double click on your boards name which you have created.

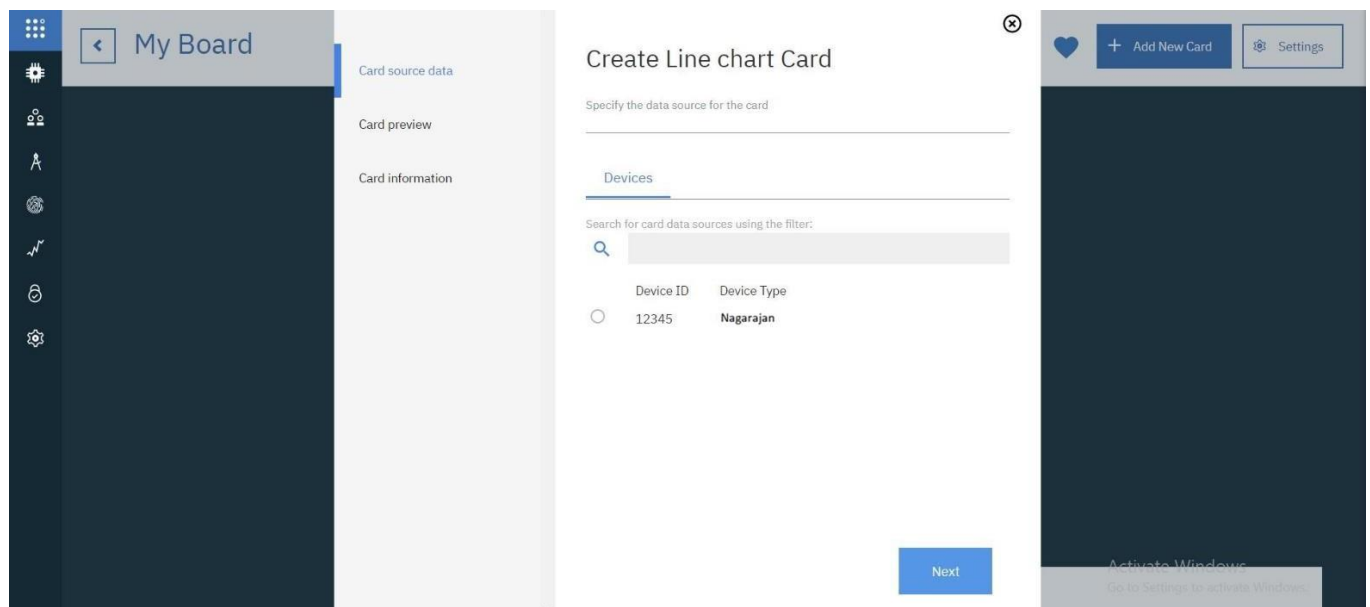

- Click on Add New Card

- Select the type of Graph u want accordingly and click next

- You get the below window, choose the Device and click on Next.

- Select the event, properly to be visualized on your graph and click next. In my case it is humidity

The screenshot shows the 'Create Line chart Card' interface. On the left, a sidebar contains icons for various data sources. The main panel is titled 'Temp & Hum' and has a sidebar with 'Card source data', 'Card preview', and 'Card information'. The 'Card source data' section shows a value of 12345. The main panel is titled 'Create Line chart Card' and has a sidebar with 'Connect data set', 'Title', 'Colors scheme', and 'A line chart to display time series information with historic and live data'. The 'Connect data set' section is active, showing fields for 'Event' (event_1), 'Property' (Temperature), 'Name' (Temperature), 'Type' (Number), 'Unit' (Max: 100), and 'Text'. The 'Number' type is selected. The 'Next' button is visible at the bottom right.

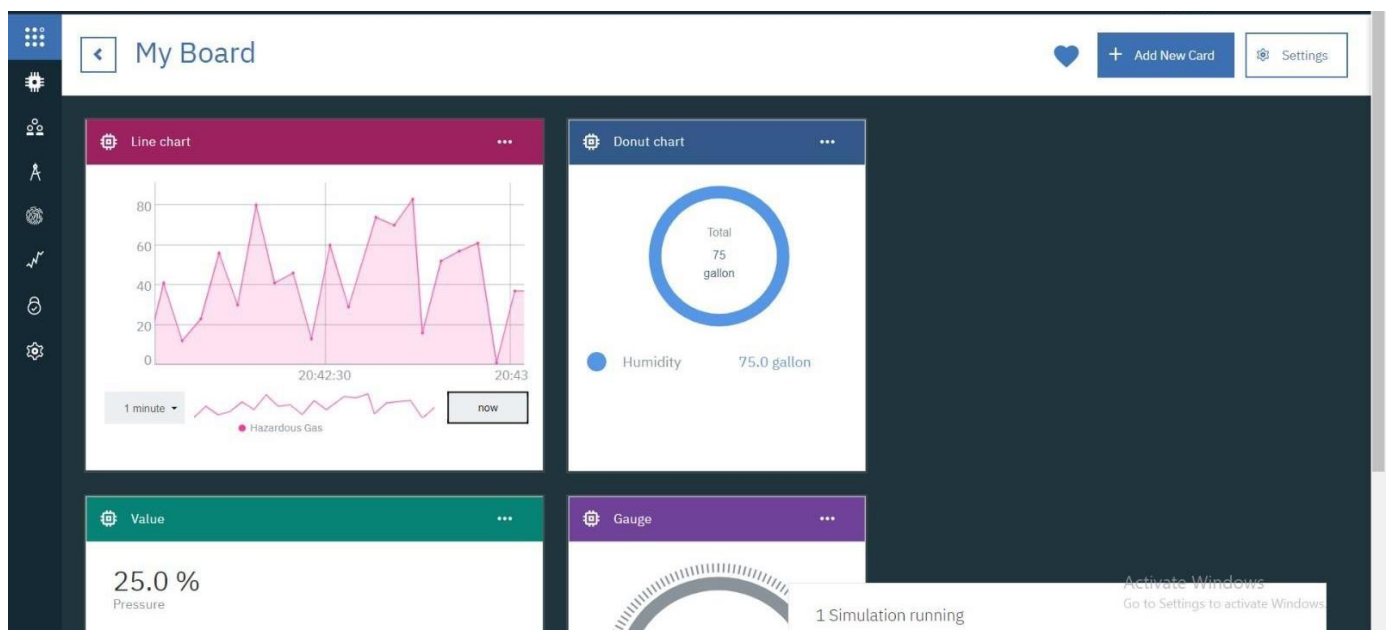

- Then select the size of the graph and color of the graph board you want and click next

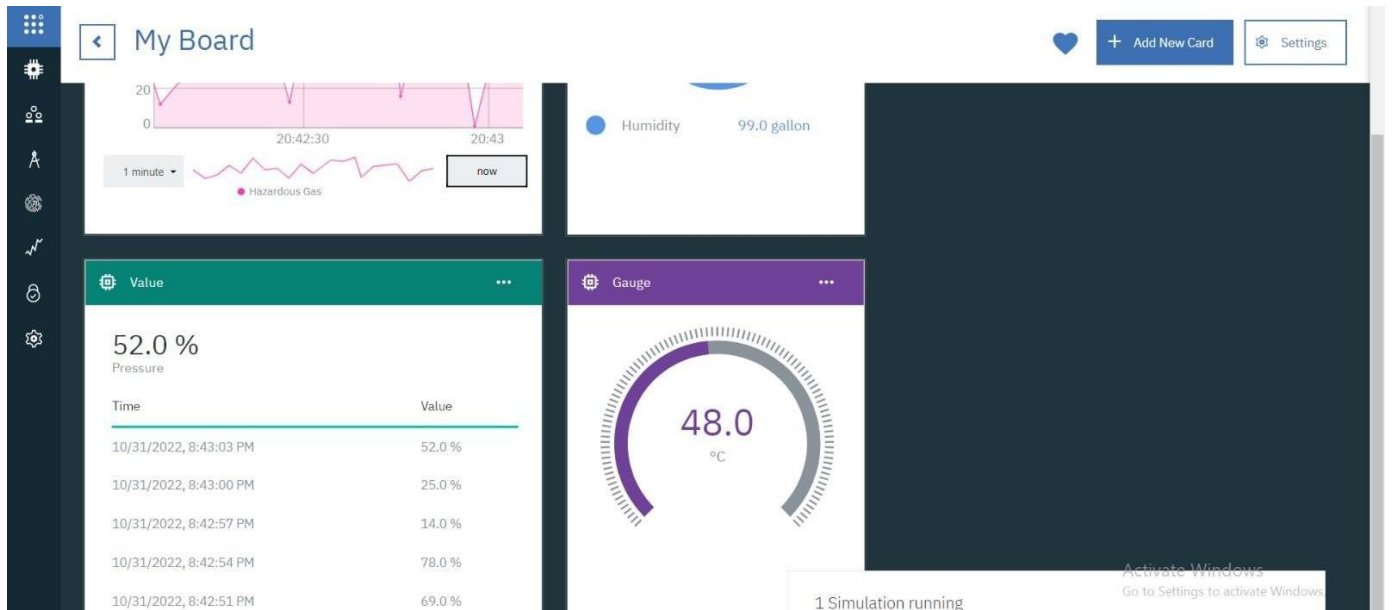

The screenshot shows the 'Create Line chart Card' interface. On the left, a sidebar contains icons for various data sources. The main panel is titled 'Temp & Hum' and has a sidebar with 'Card source data', 'Card preview', and 'Card information'. The 'Card source data' section shows a value of 12345. The main panel is titled 'Create Line chart Card' and has a sidebar with 'Connect data set', 'Title', 'Colors scheme', and 'A line chart to display time series information with historic and live data'. The 'Title' section is active, showing a title of 'Line chart'. The 'Colors scheme' section shows a selection of five colors: purple, red, green, blue, and teal. The 'Submit' button is visible at the bottom right.

➤ Here is the graph

➤ Repeat the process to get different graphs.

RESULT:

Hence, we were able to send data from our pi to IBM Watson and visualize it on a graph.
